\$75 per person, per class.

Fee includes **training material, lunch, and breaks.**

Note: There will be NO SPO subsidy for CEO's and LPI's this year.

A cancellation fee of \$25 will be charged if you do not provide notice of cancellation 48 hours prior to the day of the program.

Returned check subject to \$15 fee.

To avoid a \$15 late fee, please register before the deadline indicated.

Registration Hours: 8:00 AM – 8:30 AM

Workshop Hours: 8:30 AM – 4:00 PM

Lunch: Provided at all programs

Certification:

A JETCC certificate of participation will be issued to those who attend and complete a workshop. Six and one-half Training Contact Hours will be awarded. This will apply to re-certification for LPIs and CEOs as well as towards the Maine DHHS and DEP Voluntary Certification Program for Septic System Installers & Contractors.

Instructors:

All training sessions are led by staff from the Maine Department of Health and Human Services' Subsurface Wastewater Program.

Course # J0923

Ethical and Technical Issues for the Site Evaluator

This course will be presented by Maine's Department of Health and Human Services (DHHS) Subsurface Wastewater Program staff and guest speakers, who will discuss ethical and technical subjects experienced by designers of subsurface wastewater disposal systems. The ethics portion of the course will focus on the point when a Site Evaluator stops being a consultant and becomes an advocate for a client. Technical topics will include calculation of fill and fill extensions, site evaluation requirements on filled sites, on-site monitoring of seasonal high groundwater, and the determination of whether a system is engineered or can be designed by a site evaluator. This course will primarily be of interest to licensed site evaluators, but is open to all, including local plumbing inspectors and system installers.

Subsurface Wastewater System Inspection

Attendees completing this day-long session will earn a voluntary certification for conducting inspections of operating subsurface wastewater disposal systems. Maine's Department of Health and Human Services (DHHS) and Department of Environmental Protection (DEP) have developed a voluntary inspection program that is promoted for use at the time of property transfers. By law, this inspection is now mandatory in the coastal shoreland zone. This process, however, can be used any time a system owner wishes to document an existing subsurface wastewater disposal system. This session, presented by Subsurface Wastewater Program staff and certified system inspectors, will describe the techniques needed to complete the DHHS State Inspection Report Form (HHE-240). Several examples of typical inspection scenarios will be discussed including a review of completed inspection report forms. Advanced techniques and equipment relating to existing system evaluation will be reviewed.

Subsurface Wastewater Disposal Rule Revisions

This course will be presented by Maine DHHS Subsurface Wastewater Program staff, who will focus on the changes to the Maine Subsurface Wastewater Disposal Rules, CMR 241, which become effective in April 2009. Attendees will receive a full copy of the Subsurface Wastewater Disposal Rules, April 2009 edition. This course will primarily be of interest to licensed site evaluators, local plumbing inspectors, and system installers, but is open to all interested parties.

Course # J0921

Basic Onsite Wastewater System Installation

This session will be presented by Maine DHHS Subsurface Wastewater Program staff and will provide installers of subsurface wastewater disposal systems with a basic understanding of the design, permitting, construction, and inspection processes contained in the Maine Subsurface Wastewater Disposal Rules, CMR 241. The various types of recognized systems will be discussed, with significant time devoted to identification and explanation of the rule sections that relate directly to the construction of subsurface systems. A detailed description of the inspection process will be featured, stressing system construction aspects that are critical to the successful long-term functioning of subsurface systems. The use of erosion control devices and the Dig Safe process will also be covered.

Attendees who submit HHE-200 Forms for two successfully completed system installations will be granted a certification number. The details of the voluntary Certification Program for System Installers will be covered during this session.
